Containerised Solutions

Whether a new or used shipping container, we have the ability to convert it into any facility you would require, from a fast moving military force or workforce. From a basic guard house to a complex item such as a kitchen, canteen or even barber shop, we are capable of designing, manufacturing and installing it to your requirements and needs.

As in the case of the HERCon™, these units can be supplied with our unique quarter height container to support members in the field with fresh water and collecting all grey and black water, hereby supporting the complete and independent deployment of these units.

The quarter height container is supplied to assist the client during the initial deployment of an installation crew, allowing for an autonomous deployment in support of 10 members for a period of 36 hours.

The system has separate 1350lt portable and sewage holding tanks and can be either refilled and cleaned or directly coupled to the required services once available on site. It can be incorporated with any of our water based products, whether an ablution facility, barber shop or canteen and can also be used independently in support of water and sewage reticulation.
